

## Reference project/application

Extraction solution for ethanol vapors

### Situation/challenge

- Milling process where it has to be cooled with ethanol
- Occurrence of aluminum chips

### Solution

- Extraction unit ACD220Ex with separator tank especially connected to the milling machines
- Connection by means of a DN50 hose and muff
- Specially made new window and aluminum plates

### User benefits

- No fumes or smell
- The aluminum chips remain in the separator tank
- Chips are prevented from entering the ULT unit filter top
